

## Tutorial $\Rightarrow 6$

Q1) What do you mean by minimum spanning tree? What is the application of MST?

$\Rightarrow$  sol<sup>n</sup>:- A MST is a subset of the edges of a connected, edge-weighted undirected graph that connects all the vertices together, without any cycle and with the minimum possible total edge weight.

### Applications:-

- 1. Designing local Area network.
- 2. Laying pipelines connecting offshore drilling sites, refineries and consumer markets.
- 3. Suppose you want to construct highway or railroads spanning several cities then we use the concept of MST.
- 4. To reduce cost, you use the concept of MST to connect the houses.

Ques<sup>n</sup> 2) Please Analyse the time and space complexity

Algorithm	Time Complexity	Space Complexity
Prims	$O(V^2)$	$O(V+E)$
Kruskal	$O(E \log V)$	$O(\log(E))$
Dijkstra's	$O(V^2)$	$O(V+E)$
Bellman ford	$O(VE)$	$O(V)$

Ques 3) Apply Prim's and Kruskal algorithm on the Graph.
